

# Facial Identification

**E-Fit**  
for Windows™

*E-FIT is a computer based facial composition system, that enables a trained operator to produce an accurate "type-likeness" based upon a witness's description.*

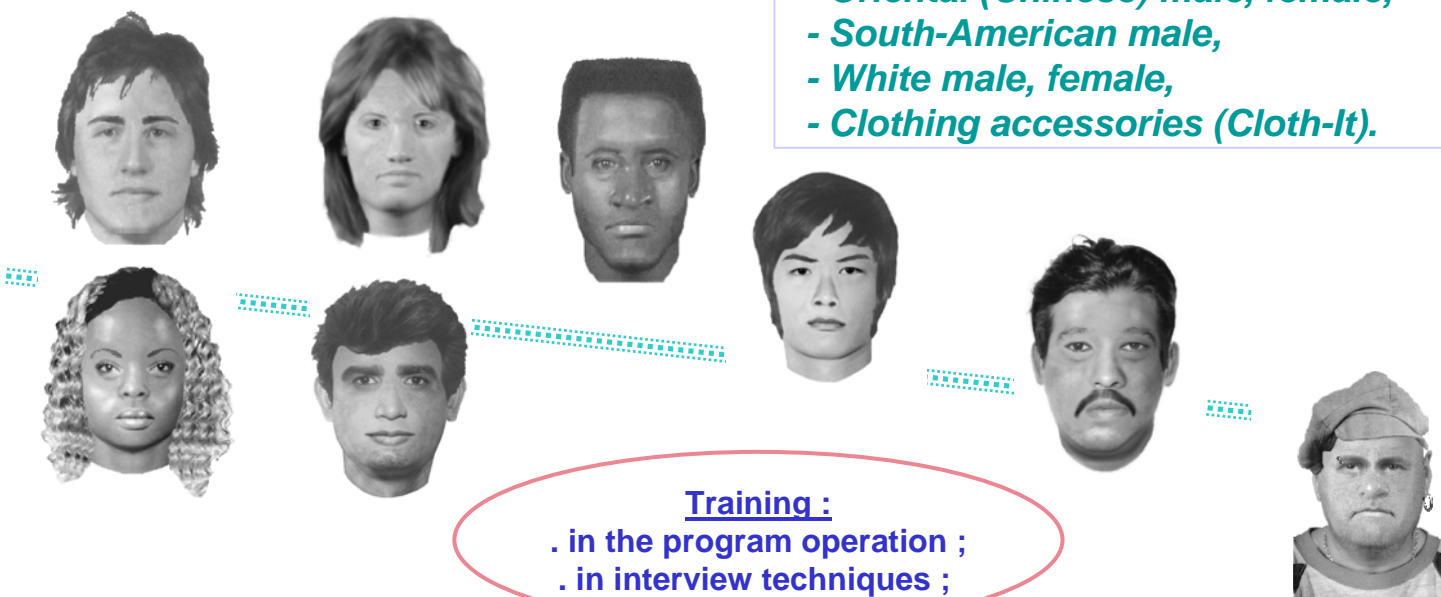

*E-FIT is unique since it recognises, and was developed to include, the psychological factors that affect our ability to recall and recognise faces.*

*It has been designed so that novice operators can easily and quickly produce accurate images.*

**Used by police services  
in 25 countries, including F.B.I.  
and Scotland-Yard**

### Available databases :

- Arab male
